

ZP-4B

Dry Powder Developer

ZYGLO® ZP-4B is a free-flowing, white fluffy powder supplied ready to use. It forms a thin white film for a contrasting background around penetrant indications, which enhances the visibility of ultra-fine discontinuities.

FEATURES

- Even, thin developer coverage
- Enhances visibility of ultra-fine discontinuities

SPECIFICATION COMPLIANCE

- AMS2644
- ASME BPVC-V
- ASTM E165/E165M-18
- ASTM E1417/E1417M
- EN ISO 3452-2
- MIL-STD-2132
- Pratt & Whitney PMC 4356-4
- Rolls Royce RRP 58003 (CSS 232)
- SAFRAN Pr 5000/In 5000

APPLICATIONS

Defect location: open to surface

Ideal for:

- Castings
- Turbine components
- Critical components

Defect examples:

- Cracks
- Seams
- Porosity

COMPOSITION

A mixture of inert developing powders.

PRODUCT PROPERTIES

Form and colour	Fluffy white powder
AMS 2644 class	Form a - Type 1
Density	0.25 g/cm ³
Sulphur content	< 200 ppm
Chloride content	< 350 ppm
Corrosion	Meets AMS 2644

Like all Magnaflux materials, ZP-4B is closely controlled to ensure batch-to-batch consistency, optimum process control and inspection reliability.

USER RECOMMENDATIONS

NDT Method	Penetrant Testing
Storage temperature	10°C to 30°C
Usage temperature	5°C to 55°C
Cleaner/remover	SKC-S
Water-washable penetrants	ZL-15B, ZL-19, ZL-60C, ZL-60D, ZL-67B, ZL-56
Post-emulsifiable penetrants	ZL-2C, ZL-27A, ZL-37

ZP-4B

INSTRUCTIONS FOR USE

Before using any developer, ensure the test surface is clean, free from excess penetrant, and dry. Residue from water-based penetrants can be removed with a water spray; solvent-based penetrants by wiping with a solvent cleaner.

With **visible penetrants**, cracks will appear as red lines and porosity as spots. If you see a general reddish colour or pink film, that means the penetrant was not completely removed.

With **fluorescent penetrants**, indications will fluoresce bright yellow/green under UV light (we recommend our EV6000 UV-LED lamp). If you see a general greenish film, that means the penetrant was not completely removed.

Apply by dusting, powder puffer, powder storm or electrostatic spray.

Allow a development time of at least 10 minutes before inspecting under UV(A) light.

After inspection, developer residue can be removed by wiping with a cloth, or by a water and detergent wash.
