

TREAT, FILTER, REPEAT.

**TREAT Rinsewater. SIMPLIFY DISPOSAL.
KEEP INSPECTIONS MOVING.**

Magnaflux rinsewater treatment systems use activated carbon filtration to remove penetrant contamination from rinsewater, helping streamline disposal while supporting a cleaner, more efficient NDT process. Treated rinsewater may be discharged in accordance with applicable local regulations.

WHICH SOLUTION IS RIGHT FOR YOU?

S200SA Mobile Solution

- Semi-automated operation
- Replaceable activated carbon drum
- Simple drain control after treatment
- Flexible for multiple work areas

S500/S500C Stationary Solution

- Continuous activated carbon filtration
- Automatic pump operation
- Ideal for higher-volume applications
- S500C includes a coalescing filter for pre-rinsewater
